

The members of the committee approve the dissertation of Kevin D. Pittle
Defended on October 21, 2005.

Judy K. Josserand
Professor Directing Dissertation

Peter P. Garretson
Outside Committee Member

Glen H. Doran
Committee Member

Bruce T. Grindal
Committee Member

Approved:

Dean R. Falk, Chair, Department of Anthropology

The Office of Graduate Studies has verified and approved the above named
committee members

ACKNOWLEDGEMENTS

I would like to express my deep gratitude to the many people who have helped me to complete this dissertation. First, I would like to thank my dissertation supervisor, J. Kathryn Josserand for her commitment to excellence and her unwavering support throughout the course of my studies. In addition, I would also like to thank her husband, Nicholas A. Hopkins, a mentor to whom I owe much of the inspiration behind this research. I am also grateful to my doctoral committee, Dr. Glen Doran, Dr. Bruce Grindal, and Dr. Peter Garretson, who have all contributed significantly to my formation as a scholar.

I would like to thank the Garden Club of America, whose generous funding through the Anne S. Chatham Fellowship in Medicinal Botany made this research possible. In addition, I would like to thank the Florida State University for awarding me a Dissertation Research Grant to complete this project.

I am grateful to Dr. James Miller, Mr. Riadh Saadaoui, and the staff at Le Centre d'études maghrébines à Tunis for their assistance during the field component of this project. I would also especially like to thank Khaled for his friendship and hard work, as well as Jamal, Tawfik, Sabr, and the other herbalists who shared their knowledge of healing plants with me.

I would like to acknowledge my debt to Bonnie Brown, who edited an early draft of this manuscript, and to David Russell who helped with the figures. Any deficiencies that remain are my own responsibility and do not reflect your excellent work, but rather, my own recalcitrance.

Finally, I wish to thank my beloved family. Without the help and inspiration of my parents, Marshall and Eileen Pittle, and my grandmother, Esther Danto, I would not have embarked on this journey. My in-laws, Marge and Bill Glauch also provided a great deal of support and encouragement, for which I am thankful. I owe my deepest gratitude to my wife, Natasha, and to our dear children, Emeth, Mekerah, and Jonathan, who endured much, encouraged much, and without whom I would not have been able to complete this work.

TABLE OF CONTENTS

List of Tables	vi
List of Figures	vii
Abstract	xi
INTRODUCTION: SECOND GENERATION COGNITIVE ANTHROPOLOGY AND THE PROBLEM OF HISTORY	1
Toward a Solution for the Problem of History	3
Necessary Assumptions	4
General Research Hypotheses	6
Significance of the Study	6
Delimitations	8
Preliminary Definitions and Key Terms	10
1. BACKGROUND: ISLAMIC MEDICINE IN CONTEXT	14
The "System" of Islamic Medicine	14
Philosophical Bases of the System	17
Prevention and Treatment in the System	19
Underreporting of an Important Aspect of the System: Herbs	20
The Sources of Middle Eastern Medicine	21
Ancient Near Eastern Medicine	21
Greek Humoral Medicine	25
Prophetic Medicine and Popular Movements	28
Problems with Identifying the "Sources" of Islamic Medicine	29
Relevant Historical Interactions of Middle Eastern Societies	30
The Pharmaceutical Trade	32
Traveling Physicians, Traveling Texts	34
Trade and Pilgrimage Routes	36
Socio-Political Factors	43
Linguistic Factors	44
Shifting Intellectual Centers	51
The Significance of Historical Interactions for the Development of Islamic Medicine	52
2. LITERATURE REVIEW: THEORETICAL AND METHODOLOGICAL SOURCES FOR COGNITIVE DIALECTOMETRY AND DIACHRONIC PHENETICS	54
Cognitive Categories: G1 and G2 Perspectives and Instruments	54
First-Generation Cognitive Studies	55
Second-Generation Cognitive Studies	67
Taxonomy, Phylogeny, and Change	74
Biological Models	75
Linguistic Models	84
Cultural Models	104

Implications of Prior Theory and Method for the Present Research	123
3. METHODS: MEASURING RELATIONSHIPS BETWEEN COGNITIVE DIALECTS	124
Design Parameters of the Research Project	124
Derivation of Specific Hypotheses and Associated Variables	131
Sources and Sampling Procedures	133
Data Collection and Analysis: Techniques and Measures	136
Limitations of the Study	143
4. RESULTS: A NUMERICAL TAXONOMY OF ISLAMIC MEDICAL SYSTEMS AND THEIR ANTECEDENTS	145
Description of the Sample	145
Group I, Modern Sources Only	145
Group II, Pre-Modern and Modern Core Sources	148
Results	152
The Cognitive Structures of Islamic Medical Systems and Their Antecedents	152
Relationships and Influences among Sources	161
The Efficacy of Various Instruments and Measures	185
CONCLUSIONS: THE EFFICACY OF A PHENETIC APPROACH TO COGNITION	188
Overview of the Study	188
Toward the Measurement of Cognitive Dialects of Islamic Ethnomedical Practice	188
Procedures for Measuring Cognitive Dialects	190
Research Hypotheses Considered	193
Results and Conclusions	193
Major Findings	194
Conclusions and Interpretation	194
Implications	199
Theory	199
Methodology	200
Recommendations for Future Research	200
BIBLIOGRAPHY	199
BIOGRAPHICAL SKETCH	221

LIST OF TABLES

1. Similarity Rankings of Sources in Group I, in Arbitrary Units	172
2. K-Means Clustering Results for Sources in Group I (A)	175
3. Similarity Rankings of Sources in Group II, in Arbitrary Units	178
4. K-Means Clustering Results for Sources in Group II ($U_{A/G}$)	182

LIST OF FIGURES

1.1 The Middle East and Central Asia: Political Boundaries, 1990	31
1.2 The home of myrrh and frankincense	33
1.3 Ibn Battuta's Return itinerary from China to North Africa, 1346-1349 ...	38
1.4 External Trade Routes of India	39
1.5 Trade Routes Connect the Middle East and Asia	40
1.6 Some Principal Lines of Trade in Africa and the Middle East	41
1.7 African Pilgrimage Routes to Mecca, ca. 1300-1900	42
1.8 Muslim schools of law and Sufi brotherhoods: c. 1500	45
1.9 The Eastern Mediterranean and the Middle East, C.E. 600	46
1.10 The Spread of Islam	47
1.11 Major Middle Eastern and Central Asian Languages	49
2.1 Levels of Contrast in "Skin Disease" Terminology	57
2.2 Levels of Branching Diagram	58
2.3 Comparison of diagrammatic representation of the semantic structure of a fragment of Hanunoo classification of peppers using a tree diagram (top part of figure) and box diagram (bottom part of figure)	58
2.4 Taxonomic structure derived from a pile sorting of home garden produce	59
2.5 Critical Contrasts Differentiating the 'Sores'	61
2.6 Mean semantic differential factors	63
2.7 Diagrammatic representation of Romney feature analysis of English male kin terms	64
2.8 Example of Sort Table	65
2.9 Equivalent Response Sets	65
2.10 American-English Belief-Frames	71

2.11	Taxonomy for American-English Disease Terms	73
2.12	'Two-Dimensional Scaling and Clustering Model of 33 A'ara Verbs of Interpersonal Conflict'	74
2.13	Phenogram of 81 species of gulls and terns based on UPGMA cluster analysis of correlation coefficients of 51 skeletal measurements	80
2.14	Determination of the most parsimonious cladogram using Hennegian argumentation	83
2.15	The Indo-European family tree	88
2.16	A wave diagram of the Germanic family	91
2.17	Some overlapping features of special resemblance within the Indo-European languages, conflicting with the family-tree diagram	92
2.18	Pidgin English in the Pacific around 1880	103
2.19	Linguistic Influences on Tok Pisin around 1900	103
2.20	Listing, classifying, analyzing, and system: data map	104
2.21	The morphology of a Culture Region (after D. Meinig)	110
2.22	Principal Sun Dance influences	112
2.23	A phylogeny of nine Kenyan pastoralist cultures	115
3.1	The interactive model of research design used in this study	125
3.2	Basic relationships among groups, techniques, and measures	129
3.3	Path Diagram of Hypotheses	133
3.4	Diagram of procedures for data collection and analysis	137
4.1	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions from Aleppo, Syria	154
4.2	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions from Cairo, Egypt	155
4.3	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions from Gaziantep, Turkey	156
4.4	Hierarchical clustering tree representing the distributional similarity of drug plants from India, as classified by their Ayurvedic properties	157
4.5	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions from Karachi, Pakistan	158
4.6	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions from Marrakech, Morocco	159

4.7	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions from Sanaa, Yemen	160
4.8	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions from Modern Syria	162
4.9	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions from Modern Egypt	163
4.10	Hierarchical clustering tree representing the distributional similarity of drug plants used in prescriptions by al-Kindi	164
4.11	Hierarchical clustering tree representing the distributional similarity of drug plants noted by ibn Wafid, as classified by their humoral properties	165
4.12	Hierarchical clustering tree representing the distributional similarity of drug plants noted by Chisti (Pseudo-Avicenna), as classified by their humoral properties	166
4.13	Hierarchical clustering tree representing the distributional similarity of drug plants used in c. 400-500 A.D. Greco-Syriac prescriptions (Syriac α)	167
4.14	Hierarchical clustering tree representing the distributional similarity of drug plants used in c. 200-300 A.D. "native" Syriac prescriptions (Syriac β)	168
4.15	Hierarchical clustering tree representing the distributional similarity of drug plants used in c. 800-900 A.D. Coptic prescriptions (P. Chassinat)	169
4.16	Hierarchical clustering tree representing the distributional similarity of drug plants used in c. 1500 B.C. Egyptian prescriptions (P. Ebers)	170
4.17	Complete Linkage Cluster Analysis of Sources in Group I Pearson Correlation Coefficient of A	173
4.18	Complete Linkage Cluster Analysis of Sources in Group I Pearson Correlation Coefficient of U_A	173
4.19	Two-Dimensional MDS Solution for Sources in Group I, U_A	174
4.20	Plot of Principal Components of Similarity Data, A	174
4.21	Complete Linkage Cluster Analysis of Sources in Group I Pearson Correlation Coefficient of U_A	179
4.22	Complete Linkage Cluster Analysis of Sources in Group I Pearson Correlation Coefficient of U_G	179
4.23	Two-Dimensional MDS Solution for Sources in Group II, U_A	180
4.24	Two-Dimensional MDS Solution for Sources in Group II, U_G	180

4.25	Plot of Principal Components of Similarity Data, U_A	181
5.1	Principal ethnopharmacological influences as reconstructed from values in Table 1	197
